SKU: N/A | **Categories:** [Additive Manufacturing](#) |

Low Price　High Quality

PRODUCT DESCRIPTION

These boards enable synchronous, real-time control of scan systems and lasers. Included DLLs facilitate straightforward program development under Windows. Every 10 μs, a 16-bit control signal is transmitted to the scan system. The RTC board´s processor performs vital steps such as micro-vectorization and image field correction.

High Flexibility
System integrators can access various programmable laser signals for vector or bitmap processing. And a multitude of available options (e.g. 3D, galvanically isolated laser signals, processing-on-the-fly) provides maximum flexibility.

With the RTC4 Ethernet control boards end customers can connect their own PCs/laptops via Ethernet.
